Cob2Web

Program Description

Cob2Web is a command line utility that extracts files from a .COB file into a given directory. It allows customizing CoBos web pages.

Possible customizations are
> replace the Lantronix logos
> change the look and feel of the web page (font, colours …)
> provide only a subset of the configuration settings and menus

After changing the web pages, they must be converted into a .COB file with the Web2CoB utility.

Note: Please use the later version 1.3 of the Web2CoB utility (web2cob13.exe), if you are generating web pages for a pre 6.x firmware

Command Syntax

```
Cob2Web [/h] [/v] [/i <input file>] [/d <directory>]
```

/h	Help
/v	Verbose
/i \<input file\>	Name of the .COB file, default is cobox.cob.
/d \<directory\>	Name of the directory where the content of the COB file is stored, default is current directory if the directory does not exists, it is created files in an existing directory are overwritten
